PROFILE

Passionate software developer with 1+ year of experience in building full-stack web applications using Angular, Spring Boot, and Camunda. Eager to contribute to innovative solutions, collaborate in agile teams, and continuously learn emerging technologies.

PROFESSIONAL EXPERIENCE

Trinity Mobility Full Stack Developer	09/2024 – 03/2025 Bangalore
• Worked on the company’s in-house product, contributing to feature development and bug fixes across the Angular + Spring Boot stack. • Created a custom Angular page to fetch and display data from another application with filtering, search, and pagination features. • Handled backend data pagination using dynamic SQL queries and URL parameter updates. • Integrated Camunda BPM with frontend forms using Form.io and customized rendering based on Camunda form metadata from APIs. • Wrote unit test cases for Angular components and services to validate each method’s return and logic. • Used Postman for testing backend APIs and ensured smooth integration with Spring Boot backend. • Managed daily tasks using Jira, tracked project updates via Outlook, and used Jenkins for deployment to internal servers. • Collaborated in a cross-functional team following Agile practices and daily standups.	

TECHNICAL SKILLS

Java (Core, OOP, Multi-threading, Design Patterns)	Java Script
SpringBoot (Microservices, REST APIs, Hibernate/JPA, Maven)	Angular
DPA (Digital Process Automation)	Python Pandas, NumPy, Matplotlib
HTML/CSS	SQL (MySQL, MSSQL)
Git / GitHub	Jenkins
AI and MachineLearning Experimenting with OpenAI APIs to build interactive ML-based applications”	Microsoft Excel
Cursor	Lovable AI
power BI	Agile (Jira, Daily Standups)

EDUCATION

SSLC Indian International School	2018 83.20%
--	----------------

PROJECTS

Internal Process Dashboard

Frontend Developer Angular, Camunda, Jenkins

- Developed and deployed a dashboard that integrated external business process data into an internal company page using Angular and Camunda APIs.
- Designed a full-featured UI with real-time data rendering, including search, filtering, and paginated views.
- Customized frontend form rendering using dynamic metadata fetched from Camunda, ensuring flexible form behavior across workflows.
- Wrote unit test cases for Angular components and services to validate logic, data binding, and method returns.
- Used Postman to test API responses and troubleshoot backend interactions.
- Handled deployment via Jenkins pipelines and tracked development progress through Jira and Outlook in an Agile team.

Employee management system

Full-Stack Developer Spring Boot, Angular, MSSQL

- Developed a CRUD-based employee management system with Angular frontend and Spring Boot backend.
- Integrated MSSQL for persistent data storage and efficient retrieval of employee records.
- Enabled user-friendly forms for creating, reading, updating, and deleting employee profiles.
- Focused on modular code structure for easy scalability and testing.

Bad Posture Detection Web Application

- Developed a full-stack rule-based web app to detect poor posture during squats and desk sitting using webcam or video uploads.
- Implemented backend logic in Flask integrating MediaPipe and OpenCV for pose estimation and customized rule-based feedback (e.g., knee-over-toe, hunched back, neck bend).
- Built React frontend for live video capture and user interaction, including frame-by-frame posture visualization and real-time analysis messaging.
- Enabled RESTful APIs for image and video processing with CORS configuration for seamless frontend-backend communication.

Phishing Detection using Machine Learning

Python Developer ML Algorithms, Feature Engineering

- Built a classification system to differentiate between legitimate and phishing URLs.
- Trained models using supervised learning algorithms like Decision Trees and RandomForest.
- Preprocessed web-based features such as domain structure, SSL usage, and link behavior.
- Evaluated accuracy across datasets and optimized model performance for real-time detection.

Village Survey Management System

Full-Stack Developer Angular, Spring Boot, MySQL

- Designed a centralized web-based system to maintain detailed records of village residents.
- Implemented secure CRUD operations managed by administrative authority for controlled access.
- Structured database to enhance population accuracy and traceability through user-specific records

INTERSHIP

- | | |
|---|--|
| • MySQL,Java ,HTML,CSS in Jspider | • Full Stack Web Development with Compssoft Technology |
| • IntrenPro – AICTE Government Internship (Ongoing) | |

CERTIFICATES

NCASTEM 2024

Issued by T.Jhon Group of Institutions

Java FullStak Web Development

Issued by Jspiders BTM Bangalore

Employability Skill Development Training Program

Issued by Seventh Sense Talent Solutions

Basics of Python (AIML)

Issued by Comsoft Technologies
